TITLE: Method and apparatus for producing information regarding the operation of a networked system

Summary of Invention Paragraph:

[0010] In a first aspect the present invention provides a method of producing operational information regarding the operation of a networked system, the system including entities arranged to communicate over the network, the method including the steps of: obtaining system configuration information regarding the configuration of the system; continuously monitoring activity of the system to obtain system activity information; and combining the system configuration information with the system activity information to obtain real time operational information.

Summary of Invention Paragraph:

[0030] In a second aspect the present invention provides an apparatus for producing operational information regarding the operation of a networked system, the system including entities arranged to communicate over the network, the apparatus including: obtaining means for obtaining system configuration information regarding the configuration of the system; monitoring means for continuously monitoring activity of the system to obtain system activity information; and combining means for combining the system configuration information with the system activity information to obtain real time operational information.

CLAIMS:

1. A method of producing operational information regarding the operation of a networked system, the system including entities arranged to communicate over the network, the method including the steps of: obtaining system configuration information regarding the configuration of the system; continuously monitoring activity of the system to obtain system activity information; and combining the system configuration information with the system activity information to obtain real time operational information.

20. An apparatus for producing operational information regarding the operation of a networked system, the system including entities arranged to communicate over the network, the apparatus including: obtaining means for obtaining system configuration information regarding the configuration of the system; monitoring means for continuously monitoring activity of the system to obtain system activity information; and combining means for combining the system configuration information with the system activity information to obtain real time operational information.
